Statement Regarding Compliance To RoHS Directives

AVTECH Software (AVTECH) is committed to designing and manufacturing products that are considered safe with respect to environmental and human health issues. AVTECH recognizes the importance of the **Restriction of Hazardous Substances (RoHS)** directive which effectively prohibits the use of certain hazardous substances from being used in electronic equipment.

We are pleased to confirm that all AVTECH products are in compliance with the RoHS directives for hazardous substances. AVTECH will continue to evaluate our environmental impact and will make improvements as appropriate to maintain compliance with future requirements and directives.

Statement Regarding Product Certifications & Safety Testing

AVTECH products use a standard power adapter that is UL certified for power and fire safety. The Room Alert and TemPageR monitors receive a low voltage power supply from this power adapter and do not require additional UL testing on the actual monitor box. Our TemPageR 4E, Room Alert 7E and Room Alert 11E monitors have all received additional FCC certification, and all newer models are designed to meet or exceed these previously tested standards.

AVTECH has previously performed certification testing on its TemPageR 4E, Room Alert 7E and Room Alert 11E products, and obtained FCC, CE and UL certification for each of these monitors. AVTECH is actively pursuing CE certification for its Room Alert 4E, Room Alert 24E and Room Alert 32E monitors. We have every confidence that this certification will be completed soon since the newest monitors are designed to meet or exceed the standards that previous monitors were certified against.
